

Key Benefits

- Large, colour touch screen display
- Simple to use & intuitive
- Multiple additional functions
- Antimicrobial protection

CT Touch

The multi-functional EZ CARE communications display is purpose designed to improve workflow in healthcare environments.

Versatility

The terminal is typically installed in patient rooms, nurses' stations and corridors. It's mainly used for communication between nursing staff and patients.

With just one touch, active calls can be queued or patients can be directly contacted to save unnecessary trips.

Superior infection protection

The risk of infection is significantly reduced with our anti-microbially protected plastics. Frictionless RFID cards used for registering presence also help reduce infections.

Multifunctional display

Call types are differentiated by different colours to make them easier to recognise from a distance.

Freely programmable touchscreen menu makes using the terminal so easy.

Additional functions can be chosen with a single button push to facilitate your workflow.

Safety first

The CT Touch monitors all connected room components and reports the status to the station. In systems with a LAN connection, our unique, patented ECS emergency operating system delivers additional security.

Exceeds HTM 0803

Our system meets and exceeds UK code of practice for added safety.

Multifunctional ...

Our display includes multiple functions to make life easy for staff.

Large intuitive colour coded screens

With a glance at our screens, you'll instantly know the acuity of the call from a distance. White for a normal call, red for an emergency and blue for cardiac calls.

Up to 6 different, freely programmable touchscreen buttons are available. Functions can be easily selected with a simple push of a button.

Care shifts

To facilitate daily routines, our CT Touch offers easy switching between day and night shifts. The current status can be seen at a glance and can be easily changed if necessary.

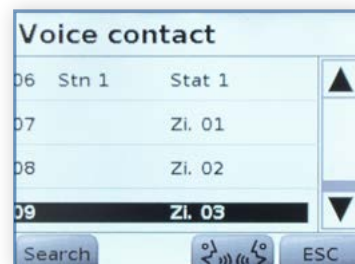

Announcements

One of the most loved features is announcements. Display buttons can be easily assigned to suit your needs (i.e: an announcement within a nurse station).

Speak directly to a room

With a simple press of a button, you can select a room to speak to.

... with many useful extra features ...

The CT Touch improves organisational workflow.

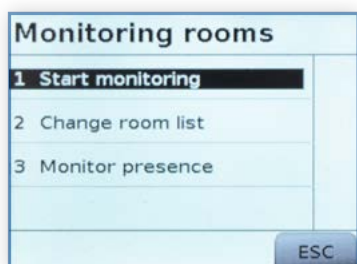

Automatic task reminders

With this function, automatic reminders can be easily set based on time (hours/minutes) to remind you of important, recurring tasks, e.g giving medication or changing bedsheets.

Of course, it's also possible to protect your CT Touch against improper use with a password.

Room status

With a single push of a button, you can quickly set the current room status. Optionally, cleaning staff can be easily notified if a room needs cleaning.

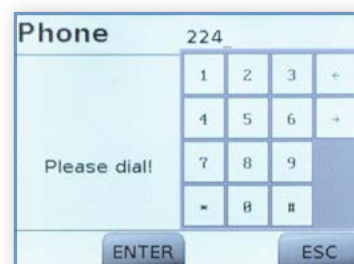

Discreet audio monitoring

This automatic polling system is particularly popular in special needs and neonatal wards. Staff can listen to preselected rooms for a certain period of time without having to enter them. If there are other people in the room, this room would be automatically skipped.

Integrated telephony

By integrating your nurse call with your PABX system, your CT Touch can also be used to make or receive calls to landlines and mobiles.

... and integrations

The integration of various additional technologies opens up further possibilities for increasing security and relieving the strain on staff.

Frictionless presence – To reduce infections

The CT Touch includes RFID as standard. Contactless activation of presence also helps with infection control. All activity can be automatically logged for evaluation.

RFID card and RFID fob

Infrared/radio transmitter

Automatic presence

When entering a room, the system automatically recognises any staff and generates a presence notification. The badges also include an integral button for emergency calls.

Integrated real time location

Real time location system (RTLS) receivers can easily be connected directly to the CT Touch. This obviates the cost and disruption of adding a separate wiring network.

Ceiling mounted
radio & infrared receivers

Portable alarm
and infrared receiver

Portable alarms

These hand held triggers are ideal for staff that work in sometimes challenging circumstances and may need to call for help in an emergency. Ceiling mounted receivers are connected directly to the CT Touch.
